Mobile Video Security Solutions

With a long and successful history of integrating mobile CCTV solutions for emergency services worldwide, TSS is now offering these same services to commercial and public transport clients.

Having installed over 5000 systems, in Public, Commercial and Blue Light Vehicles, TSS has the experience to design and install systems to the highest standard, incorporating the latest technology to ensure the best security solutions are deployed.

Offering turnkey integration of it's state of the art mobile video recorders, TSS is able to create unique vehicle solutions specifically tailored to meet your requirements.

To ensure complete integration, TSS, uses the in-house designed and manufactured TransVu range as the core of its installations.

Through the TransVu portfolio of products, TSS brings a new level of sophistication to mobile video operation. Capturing vehicle information such as; engine speed, braking / accelerating, indicators, engine diagnostics, fuel efficiency and GPS data alongside recorded video footage, the TransVu system provides a detailed log of the vehicle's journey.

TransVu

TransVu is a DVR specifically designed for CCTV & security applications in the public and commercial transportation environments. With a ruggedised design, to provide a long trouble free service in high vibration installations, TransVu is ideal for mobile surveillance in vehicles such as buses, trains and trams.

- Comprehensive transport security features ensure that passengers, driver, vehicle and its cargo can be protected at all times.
- Integrated power management facility ensures the unit can remain recording for a definable period of time even after the ignition is switched off.
- GPS, accelerometer and vehicle systems data all linked to video footage.
- Media option to provide geo-specific multimedia messaging to passengers.

TransVu Express

Small, light and robust, the TransVu Express is ideal in space restricted environments. The low power consumption and portability of the unit makes TransVu Express the ideal choice for specialist mobile security solutions and rapid deployment applications such as city centre surveillance, constructions sites and temporary event sites.

- Resilient mobile surveillance solution.
- Can be deployed in areas where power is supplied by solar panels / batteries or where health and safety considerations do not allow mains voltages (mines, remote sites).
- Ideal for mid-sized commercial or public transport vehicles such as vans, cash in transit vehicles and haulage vehicles.
- Optional solid-state drives for improved protection against harsh environments.

TransVu Compact

The smallest member of the TransVu family, the TransVu Compact offers robust security surveillance in a compact and light form factor.

- Small, light and compact.
- Efficient power usage makes surveillance of 'long-stay' vehicles such as storage cannisters and LGV Trailers cost effective.
- Solid-state storage as standard.
- Ideal for small commercial vehicles such as Taxis, Limousines and delivery vans.

AMS

AMS enables fleet operators to centrally manage the content produced by its installed devices, fixed or mobile. AMS is able to automatically index and archive all video and associated meta data from connected devices, even mobile (wireless or 3G) units.

- Automatic indexing of video and meta data to a central database from all connected devices.
- Health monitoring of all connected devices.
- Archive from mobile (wireless or 3G), or fixed asset units.
- Review incident footage even whilst a vehicle is in motion.
- Live view capability to any connected server

The AD Group

TSS forms an integral part of the AD Group of companies. AD Group with its headquarters in the UK, was established in 1997. Its primary objective is to create, combine and bring to market leading edge CCTV solutions. The pioneering nature of the AD Group's products, with the emphasis very much on R&D, has undoubtedly been a critical element in the AD Groups success to date.

One of the first companies to embrace the concept of video over IP, the AD Groups interests now include Fixed and Mobile CCTV systems for public and commercial use, sophisticated video smoke detection solutions, and camera technology for private, public and military applications.
